

Security With Speed

A Web Application Firewall IS required to be PCI compliant if you accept payments on your website. Fines for data breaches are as much as \$90 per record stolen.

Website Security

Protect your investment and your customers with Cyflare. A hacked website can lead to search engine blacklisting, infected customers, email blacklists, website data loss and more.

Performance Booster

We will optimize the delivery of your website including Image optimization, mobile optimization and geographic datacenters to distribute and cache your website.

Constant Monitoring

Cyflare Pulse monitoring will scan your web host and complete website to make sure it is not under attack and has not been infected. We monitor 24x7x365 with our security platform and a live security research team.

Adding website security doesn't mean it has to come with a speed penalty. With Cyflare Pulse we will block the bad things before they happen and deliver your website more efficiently to your end users and the search engines.

This ensures your website will not be blacklisted and it will assist in your search engine ranking because the website code is loading in an optimal way and it loads quickly.

In addition, Cyflare security engineers will remove malware if you are ever infected while on the Pulse Prevent Platform.
