

Website Monitoring & Alerting

Website Security

Protect your investment and your customers with Cyflare. A hacked website can lead to search engine blacklisting, infected customers, email blacklists, website data loss and more.

Real-time Alerts

Let Cyflare alert you in real-time should your website become infected with malware. We will simplify the process and make it easy to understand what happened and how to address the problem.

Constant Monitoring

Cyflare Pulse monitoring will scan your web host and complete website to make sure it is not under attack and has not been infected. We monitor 24x7x365 with our security platform and a live security research team.

- ✓ **Real-Time Alerting during cyber attacks**
- ✓ **Deep website security scanning daily**
- ✓ **Monthly vulnerability reporting for website and hosting**
- ✓ **Expert consulting and support when hacked**
- ✓ **Guidance and solutions to fix your website**

It's Easy To Get Started

To get started with Cyflare and begin the monitoring and alerting service **you don't need to do anything**. We can non-invasively and remotely scan your web host and website to determine if there are security issues.

For more in depth monitoring we will simply need "SSH" username and password in order to configure our scanners to search through all files in your website. This information is easily obtained from your hosting provider.

DID YOU KNOW

Website Security Stats

100% CUSTOMER SUPPORT

Cyflare is purpose built for the small business website owner that does not have the time or the knowledge of website security problems, how to combat them or how to fix them when disaster strikes.

Cyflare sends easy to understand alerts providing information on exactly what is infected and how to address the issue.

Our expert security team will work with you to provide options on **cleaning the infection, restoring all services and getting your website back online**.

Our job is to make it easy for you to keep your website protected, online and be the marketing tool or revenue stream you intended it to be.
